1   Introduction

1.1 Operational Risk in Financial Sector

Reference: « Sound Practices for the Management and Supervision of Operational Risk »
from Basel Committee (February 2003)

Deregulation and globalisation of financial services, together with the growing sophistication of financial technology, are making the activities of banks and thus their risk profiles (i.e. the level of risk across a firm's activities and/or risk categories) more complex. Developing banking practices suggest that risks other than credit, interest rate and market risk can be substantial. Examples of these new and growing risks faced by banks include:

- If not properly controlled, the greater use of more highly automated technology has the potential to transform risks from manual processing errors to system failure risks, as greater reliance is placed on globally integrated systems;
- Growth of e-commerce brings with it potential risks (e.g., internal and external fraud and system security issues) that are not yet fully understood;
- Large-scale acquisitions, mergers, de-mergers and consolidations test the viability of new or newly integrated systems;
- The emergence of banks acting as large-volume service providers creates the need for continual maintenance of high-grade internal controls and back-up systems; and
- Growing use of outsourcing arrangements and the participation in clearing and settlement systems can mitigate some risks but can also present significant other risks to banks.

The diverse set of risks listed above can be grouped under the heading of "operational risk", defined by the Basel Committee on Banking Supervision as "the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events".
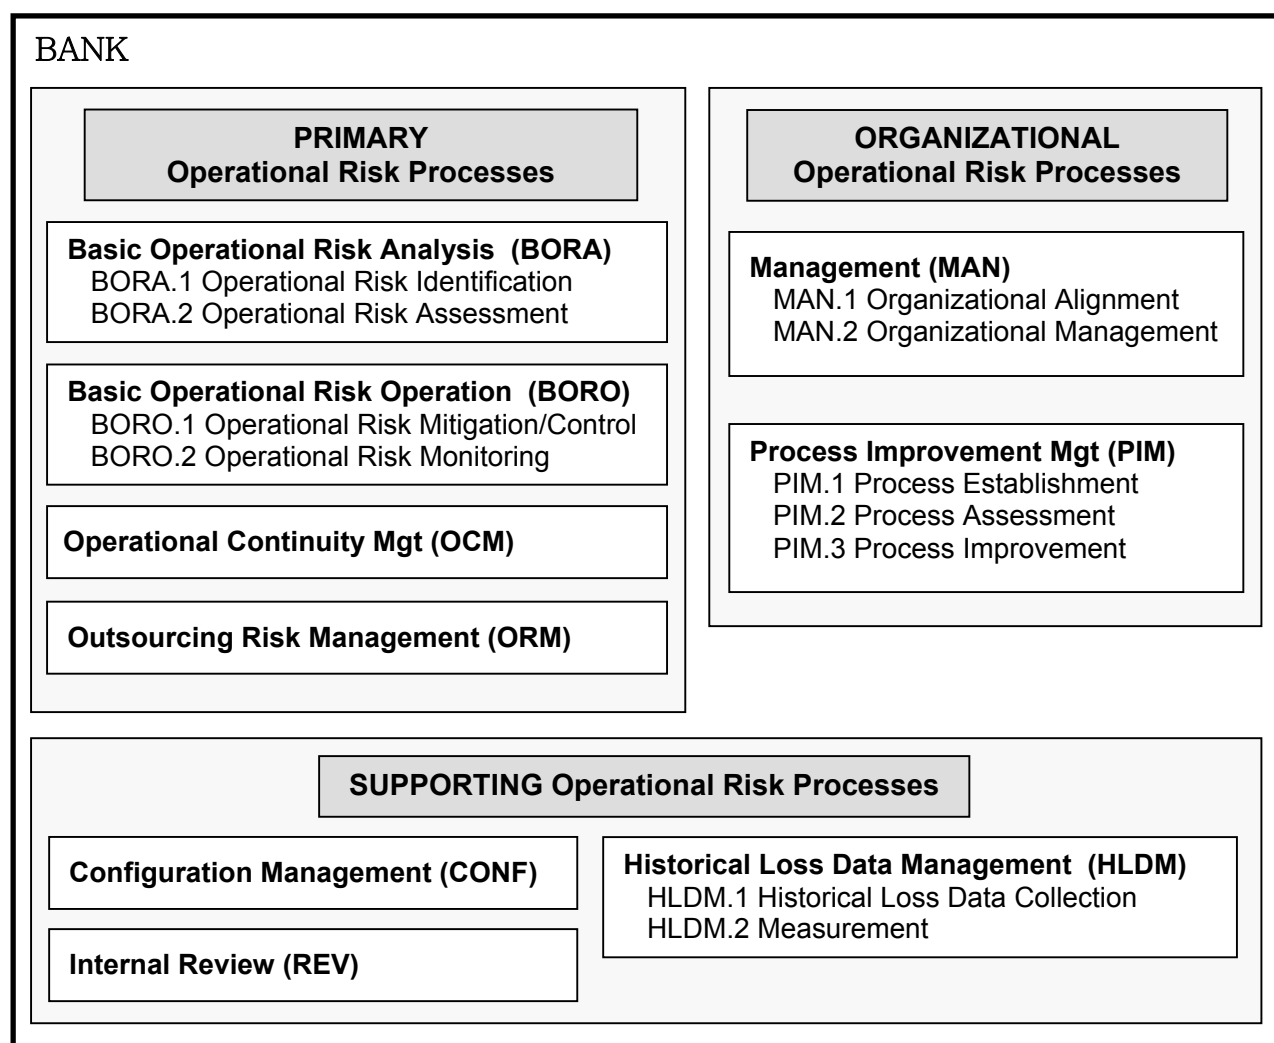

1.2 Process Reference Model

Reference: ISO/IEC 12207:1995/FDAM 1:2002 (E) page 2

This framework provides a Process Reference Model in accordance with the requirements of ISO/IEC 15504-2. A Process Reference Model provides definitions of processes described in terms of process purpose and outcomes, together with an architecture describing relationships between the processes. It does not represent a particular process implementation approach nor does it prescribe a risk management system/software, methodology or technique. Instead the reference model is intended to be tailored by a bank based on its business needs and its areas of application. The reference model's purpose and outcomes are indicators demonstrating whether the banks' processes are being achieved. These indicators are useful to process assessors in order to determine the capability of a bank's implemented process and to provide source material to plan organizational process improvement.

Operational Risk Management processes are described in this paper in terms of achievements of defined Purposes and Outcomes describing processes a bank can use to manage the operational risks. The reference model is also used to provide a common basis for different models and methods for Bank Process Assessment, ensuring that the result of the assessment can be reported in a common context.

3 Description of processes

3.1 Foreword

The strategy defined in the process outcomes characterizes the mission statement:
- Goal
- Mission of the process
- Awareness of the people involved in the process.

The strategy of the Operational Risk Management project helps to define the tools (e.g. software, working practices) to use in the different processes, the links required between them and the goal to reach.

3.2 BORA Basic Operational Risk Analysis

3.2.1 BORA.1 Operational Risk Identification

Process ID	BORA.1
Process Name	Operational Risk Identification
Process Purpose	The purpose of the Operational Risk Identification process is to identify operational risks inherent in all material products, activities, processes and systems of the bank. [[Condition: 127, 128, 129, 130, 500]] NOTE 1: The successful implementation of Operational Risk Identification process is paramount for the subsequent continuation of a viable operational risk management process. [[Condition: 135, 136]] NOTE 2: The scope of operational risk identification process must cover all the bank's organisation i.e. in all the bank's activities and all the bank's establishments; [[Condition:]] NOTE 3: Self-or risk-assessment, risk indicators, analysis of problems occurred and measurement are some possible techniques used by banks for identifying operational risk. These techniques may highlight the existence of "new" risks or increased risk exposure. [[Condition: 142, 146, 148, 149, 151,160, 862]
Process Outcomes	As a result of successful implementation of Operational Risk Identification: 1. an operational risk identification strategy is developed, including the principles of how operational risk is to be identified, according to the size, the sophistication, the nature and the complexity of the bank's activities; [[Condition: 1, 2, 3, 4, 5, 24, 356]]

NOTE 1: Policy outlining the bank's approach to identify operational risk must be defined; [[Condition: 42]]

2. context in which bank work is identified, analyzed and understood; [[Condition: 137, 138]]

3. the most important core business activities for the bank, where no disruption is allowed, are identified and analyzed; [[Condition: 137]]

4. internal and external factors that could adversely affect the achievement of the bank's objectives are identified and analyzed; and [[Condition: 137, 138]]

5. the possible new risks are identified before new products, activities, processes, systems or major changes are introduced. [[Condition: 131, 132, 133, 134]]

3.2.2 BORA.2 Operational Risk Assessment

Process ID	BORA.2
Process Name	**Operational Risk Assessment**
Process Purpose	The purpose of the Operational Risk Assessment process is to qualitatively assess identified operational risks. [[Condition: 141, 143, 660, 661]] NOTE 1: The assessment process outcomes need to be validated through comparison to actual internal loss experience, relevant external data and appropriate adjustments made. [[Condition: 534, 535]] NOTE 2: The output of the bank's internal operational risk assessment system must be an integral part of the processes of operational risk mitigation and monitoring. [[Condition: 370, 681]] NOTE 3: Self or risk assessment, risk mapping, risk indicator are some possible useful assessment indicators and; measurement and scorecards are possible techniques used by banks for assessing operational risk. [[Condition: 145, 147, 161, 152 - 159, 662-671, 859]]
Process Outcomes	As a result of successful implementation of Operational Risk Assessment: 1. a operational risk assessment strategy is developed, including the principles of how operational risk is to be assessed, according to the size, the sophistication, the nature and the complexity of the bank's activity; [[Condition: 1, 2, 3, 4, 5, 25, 357]] NOTE 1: an operational firm-assessment policy outlining the bank's

	approach to assess operational risk must be defined. [[Condition: 40]]
	2. bank is aware of the loss exposure (qualitatively) of each identified risk on its business; [[Condition: 139, 140]]
	NOTE 1: Bank should be aware that increased automation could transform high-frequency, low-severity losses into low-frequency, high-severity losses. [[Condition: 248]]
	3. identified risks are organized (7 loss event types in Basel II) and prioritized accordance with their impact on the bank and frequency; and[[Condition: 139, 455]]
	4. bank's risk profile is determined and kept up to date. [[Condition: 140]]

3.3 BORO Basic Operational Risk Operation

3.3.1 BORO.1 Operational Risk Mitigation/Control

Process ID	BORO.1
Process Name	Operational Risk Mitigation/Control
Process Purpose	The purpose of the Operational Risk Mitigation/Control process is to mitigate the assessed operational risks and to manage operational risk impact. [[Condition: 227, 303, 884]]
	NOTE 1: Severity and impact of a loss event on bank's business is only reduced if the Operational Risk Mitigation/Control process and Operational Risk Monitoring process are successfully implemented.
	NOTE 2: The results of Measurement process should be useful for the effectiveness of this process. In AMA, it's mandatory [[Condition: 417, 874]]
	NOTE 3: The output of the bank's internal risk assessment system must be an integral part of the process of controlling the banks operational risk profile. [[Condition: 680]]
Process Outcomes	As a result of successful implementation of Operational Risk Mitigation/Control:
	1. an operational risk mitigation and control strategy is developed, including the principles of how operational risk is to be mitigated and how its realization is to be control, according to the size, the sophistication, the nature and the complexity of the bank's activity; [[Condition: 1, 2, 3, 4, 5, 27, 359]]

NOTE 1: an operational firm-mitigation policy outlining the bank's approach to mitigate operational risk must be defined. [[Condition: 223]]

2. the existing option to mitigate risk are analysed and, for each risk, the most in accordance with bank's strategy is chosen; [[Condition: 229]]

NOTE 1: it's possible to apply more than one option for a specific operational risk.

NOTE 2: existing options are:
   - acceptance: risk is retained by the organisation.
   - transfer: transferring, partially or totally, the risk to another organisation (insurance is an example). [[Condition: 230]]
   - control: reducing the likelihood and/or consequences of the risk. [[Condition: 228]]
   - stop/reduction business activity: deciding to not carry on the proposed activities due to risk being unacceptable or finding another alternative that is more acceptable. [[Condition: 231, 484, 485]]

3. changes in bank's organization and activities to mitigate risks are planned and implemented in accordance with bank's risk profile; [[Condition: 223]]

NOTE 1: Segregation of duties and minimization of potential conflict interest is an major change to mitigate operational risks [[Condition: 242, 239, 240, 241]]

NOTE 2: Risk mitigation tools or program can be used to reduce the exposures to, or frequency, high severity low-losses which may occur as a result of such events (low frequency high-severity). However, risk mitigation tools are complementary to, rather than a replacement for, thorough internal operational risk control. [[Condition: 246, 247]]

4. residual risks resulting from mitigation actions are identified to ensure the day-to-day tracking of those risks;

5. a risk achievement control policy is developed and communicated to all people involved in bank's operational activities; and [[Condition: 8, 39, 220, 238, 245, 362, 631, 632, 633]]

6. corrective actions are performed when a risk is under way and the performance of these actions are tracked until risk is completed.

GRIF PROJECT
Basel II – Operational Risk Management:
Process Reference Model

COMMISSION de SURVEILLANCE
du SECTEUR FINANCIER
L U X E M B O U R G

3.3.2 BORO.2 Operational Risk Monitoring

Process ID	BORO.2
Process Name	Operational Risk Monitoring
Process Purpose	The purpose of the Operational Risk Monitoring process is to provide, in a timely manner, relevant information to ensure effectiveness of operational risk management. [[Condition: 11, 171, 172]] NOTE 1: The output of the bank's internal risk assessment system must be an integral part of the process of monitoring the banks operational risk profile. [[Condition: 679]] NOTE 2: The output of measurement process should be useful to monitoring activities efficiency. In AMA, it's mandatory [[Condition: 416, 873]]
Process Outcomes	As a result of successful implementation of Operational Risk Monitoring: 1. an operational risk monitoring strategy is developed, including the principles of how operational risk is to be monitored, according to the size, the sophistication, the nature and the complexity of the bank's activity; [[Condition: 1, 2, 3, 4, 5, 41, 26, 177, 178, 179, 358]] 2. monitoring information (e.g. risk indicators) are identified, collected, recorded and updated; [[Condition: 173, 174, 175, 183, 184, 185, 368]] NOTE 1: When thresholds are directly linked to these indicators an effective monitoring process can help identify key material risks in a transparent manner and enable the bank to act upon these risks appropriately. [[Condition: 176]] 3. information contained in the reports and the frequency of reports are suitable regarding the profile of the recipients; [[Condition: 169, 170, 177, 178, 179, 243]] 4. conditions in which special reports (e.g. urgency, alert) must be issued quickly as well as procedure to generate and convey them are defined; and 5. the reporting of information to all people concerned by operational risk management is performed. [[Condition: 169, 170, 181, 182, 190, 195, 196, 211, 372, 373, 374]] NOTE 1: Board of directors, senior management and business unit management should be kept informed of loss experiences and material operational losses to enable the bank's overall operational risk profile and to support proactive management of operational risk. [[Condition: 216, 217, 218, 219, 375, 376, 377, 421, 423, 425]]

	NOTE 2: Reports should be analysed with a view to improving existing risk management performance as well as developing new risk management practices, policy and procedure(PIM processes). [[Condition: 213, 214, 215]] NOTE 3: Reports generated by or for supervisory authorities should likewise be reported internally to senior management and board of director where appropriate. [[Condition: 188, 189, 212, 868, 869, 870, 871]]

3.4 OCM Operational Continuity Management

Process ID	**OCM**
Process Name	**Operational Continuity Management**
Process Purpose	The purpose of the Operational Continuity Management process is to support the overall Business Continuity Management process by ensuring that the required operational facilities can be recovered within required, and agreed, business timescales. *(Ref. OGC Service Delivery § 7.1.2 Goal)* [[Condition: 12, 249, 277, 283, 284]]
Process Outcomes	As a result of successful implementation of the Operational Continuity Management: 1. an OCM strategy is developed and OCM project development and control structures are defined; [[Condition: 5]] 2. Business Impact Analysis (BIA) is performed to identify bank's dependence on technology, its Infrastructure and any external providers of support services; [[Condition: 278, 279, 287, 288]] 3. the likelihood that a disaster or other serious service disruption will actually occur is determined; [[Condition: 285, 286]] NOTE 1: This is an assessment of the level of threat and the extent to which an organisation is vulnerable to that threat. 4. the OCM plan is defined, developed and periodically tested; and [[Condition: 250, 278, 279, 289, 290, 298, 299]] 5. the effectiveness of the OCM plan is guaranteed and tested. [[Condition: 292, 293, 294, 295, 296, 297 298, 299]]

3.5 ORM Outsourcing Risk Management

Process ID	ORM
Process Name	**Outsourcing Risk Management**
Process Purpose	The purpose of the Outsourcing Risk Management process is to identify, manage and mitigate the operational risks specific in outsourcing activities. [[Condition: 37, 38]] NOTE 1: A bank's use of third parties does not diminish the responsibility of the board of directors to ensure that the third-party activity is conduced in a sound and safe manner and compliance with applicable laws. [[Condition: 252, 253, 254]]
Process Outcomes	As a result of successful implementation of Outsourcing Risk Management: 1. appropriate outsourcing risk management strategy is defined and implemented, in accordance with bank's risk profile; [[Condition: 5, 251]] 2. all subcontractors are identified, their risk management system are analyzed, and contracts (SLA) are established with selected subcontractors; [[Condition: 255, 260-271]] 3. risks inherent in all outsourcing activities are identified in the outsourcing risk management strategy, and the possible new ones are assessed before new outsourcing activities are introduced; [[Condition: 256]] 4. the risks are analyzed and priority in which to apply resources to monitor these risks are determined; [[Condition: 256]] 5. risk measures are defined, applied, and assessed to determine changes in the status of risk and the progress of the treatment activities; and [[Condition: 256, 276]] 6. appropriate treatment is taken to correct or avoid the impact of risk based on its priority, probability, and consequence or other defined risk threshold. [[Condition: 256]]

3.6 MAN Management

3.6.1 MAN.1 Organizational Alignement

Process ID	MAN.1
Process Name	Organizational Alignment
Process Purpose	The purpose of the Organizational Alignment process is to enable the operational risk management processes needed by the bank to ensure the execution of mission critical activities, to be consistent with its business goals and its risk profile. [[Condition: 6, 43, 44, 344]]
Process Outcomes	As a result of successful implementation of the Organizational Alignment: 1. a new strategic vision, which include operational risk management, is developed; [[Condition: 20]] 2. the process framework is identified and defined that include a set of operational risk processes needed to achieve the business goals of the bank; [[Condition: 1, 2, 3, 4, 25, 27, 32, 33, 34, 35, 36, 52, 83, 84, 85, 620, 634, 635, 636]] 3. a strategy is defined for process definition, implementation and improvement; and support is provided to enable this strategy; [[Condition: 5, 21, 28, 29, 45, 78, 621, 622, 624]] 4. the bank's mission, core values, visions, goals and objectives are made known for all employees; [[Condition: 14, 15, 16, 17, 18, 19, 617, 618]] 5. individuals in the bank share a common vision, culture, and understanding of the business goals to empower them to function effectively; and [[Condition: 11, 14, 15, 16, 17, 18, 19, 235, 236, 237, 617, 618, 682]] 6. each individual in the bank understands their role in achieving the goals of the business and is able to perform that role. [[Condition: 79]]

3.6.2 MAN.2 Organizational Management

Process ID	MAN.2
Process Name	Organizational Management
Process Purpose	The purpose of the Organizational Management process is to establish and perform operational risk management practices, during the performance of the processes needed for ensuring the execution of mission critical activities, that are consistent with the business goals of the organization. [[Condition: 7, 77, 89, 345, 346, 616, 640, 643]]

GRIF PROJECT
Basel II – Operational Risk Management:
Process Reference Model

COMMISSION de SURVEILLANCE
du SECTEUR FINANCIER
LUXEMBOURG

	NOTE 1: operational risk management processes must be implemented in a business context and to be effective, require an appropriate organizational environment
	NOTE 2: In practice, the Committee recognizes that the audit function at some banks (particularly smaller banks) may have initial responsibility for developing an operational risk management program. Where this is the case, banks should see that responsibility for day-to-day operational risk management is transferred elsewhere in a timely manner. [[Condition: 76]]
Process Outcomes	As a result of successful implementation of the Organizational Management: 1. the bank will invest in the appropriate management infrastructure; 2. the best practices are identified to support the implementation of effective operational risk management; and [[Condition: 235]] 3. provide a basis for evaluating the achievement of bank business goals based on these risk management practices.

3.7 PIM Process Improvement Management

3.7.1 PIM.1 Process Establishment

Process ID	PIM.1
Process Name	**Process Establishment**
Process Purpose	The purpose of the Process Establishment process is to establish a suite of bank's standard processes for operational risk management as they apply to the banking activities. [[Condition: 80, 81, 82, 450, 451]]
Process Outcomes	As a result of successful implementation of the Process Establishment: 1. a defined and maintained standard set of processes are established, along with indication of each process's applicability; 2. the detailed tasks, activities and associated work products of the standard process are identified, together with expected performance characteristics; 3. a strategy for tailoring the standard process is developed in accordance with the needs of the bank's department; and

GRIF PROJECT
Basel II – Operational Risk Management:
Process Reference Model

COMMISSION de SURVEILLANCE
du SECTEUR FINANCIER
L U X E M B O U R G

	4. information and data related to the use of the standard process for specific bank department exist and are maintained.

3.7.2 PIM.2 Process Assessment

Process ID	PIM.2
Process Name	**Process Assessment**
Process Purpose	The purpose of the Process Assessment process is to determine the extent to which the bank's standard processes for operational risk management contribute to the achievement of its business goals and to help the bank focus on the need for continuous process improvement. [[Condition: 385, 386 439, 452, 453]]
Process Outcomes	As a result of successful implementation of the Process Assessment: 1. information and data related to the use of the standard process for specific bank department will exist and be maintained; 2. the relative strengths and weaknesses of the bank's standard processes are understood; and 3. accurate and accessible assessment records are kept and maintained.

3.7.3 PIM.3 Process Improvement

Process ID	PIM.3
Process Name	**Process Improvement**
Process Purpose	The purpose of the Process Improvement process is to continually improve the bank's operational risk management effectiveness and efficiency thought the processes used and aligned with the business need. [[Condition: 330, 384]]
Process Outcomes	As a result of successful implementation of the Process Improvement: 1. commitment is established to provide resources to sustain improvement actions; 2. issues arising from the bank's internal / external environment are identified as improvement opportunities and justified as reasons for

	change;
	NOTE 1: information sources providing input for change may include: process assessment results, internal audits, bank's effectiveness / efficiency.
	3. analysis of the current status of the existing process is performed, focusing on those processes from which improvement stimuli arise, resulting in improvement objectives for the process being established;
	NOTE 1: the analysis may include process assessment.
	4. the improvement objectives are prioritized, and consequent changes to the process are defined, planned and implemented;
	5. the effects of process changes implementation are monitored, measured and confirmed against the defined improvement goals;
	6. knowledge gained from the improvement is communicate within the bank; and
	7. the improvements made are evaluated and consideration given for using the solution elsewhere within the organization.

3.8 HLDM Historical Loss Data Management

3.8.1 HLDM.1 Historical Loss Data Collection

Process ID	HLDM.1
Process Name	Historical Loss Data Collection
Process Purpose	The purpose of the Historical Loss Data Collection process is to collect and maintain the integrity of relevant loss data, and make them available to concerned processes. NOTE 1: For AMA, the tracking of internal loss data is an essential prerequisite to development and functioning of a credible operational risk measurement system
Process Outcomes	As a result of successful implementation of the Historical Loss Data Collection: 1. a historical loss data collection strategy is developed, including the principles of how loss data is to be managed, according to the size, the sophistication, the nature and the complexity of the bank's activity; [[Condition: 1, 2, 3, 4, 5, 496]]

2. loss events and information collected about these loss events are specified; [[Condition: 487, 493 – 496, 683, 684, 690]]

3. all loss data generated by bank's process are collected, and the completeness and consistency of the loss data is ensured;

   NOTE 1: A bank must have documented procedure for assessing the on-going relevance of historical loss data. [[Condition: 470, 864]]

4. loss data can be mapped in 8 business lines (defined in Basel II) and made available for relevant processes; and [[Condition: 351, 352, 354]]

   NOTE 1: on demand of national banking supervisors, a bank must be able to map its internal loss data with Basel II categories. [[Condition: 473, 474]]

5. storage and handling of the internal loss data are controlled.

3.8.2 HLDM.2 Measurement

Process ID	HLDM.2
Process Name	Measurement
Process Purpose	The purpose of the Measurement process is to determine regulatory capital requirement, based on a formal and quantitative understanding of operational risks and their related losses. [[Condition: 162]] NOTE 1: A bank's risk measurement system must be sufficiently 'granular' to capture the major drivers of operational risk affecting the shape of the tail of loss estimates. [[Condition: 458]] NOTE 2: An effective way of making good use of this information is to establish a framework for systematically tracking the frequency, the severity and others relevant information on individual loss events. [[Condition: 163, 164, 165, 672, 673, 674]] NOTE 3: The output of the bank's internal risk measurement system must be an integral part of the processes of monitoring and mitigating/controlling the bank's operational risk profile. [[Condition: 416, 417]]
Process Outcomes	As a result of successful implementation of the Measurement: 1. a measurement strategy is developed, including the principles of how operational risk is to be measured, according to the size, the sophistication, the nature and the complexity of the bank's activity; [[Condition: 1, 2, 3, 4, 5, 412]]

NOTE 1: an operational firm-measurement methodology and policy outlining the bank's approach to measure operational risk must be defined.

NOTE 2:The Basel Committee is not specifying the approach or distributional assumptions used to generate the operational risk measure for regulatory capital purpose. [[Condition: 447]]

NOTE 3: a bank needs to have a credible, transparent, verifiable and documented approach for weighting the internal data, external data, scenario analysis and others factors. This weighting must be documented and well reasoned. [[Condition: 462, 463, 464, 465, 528, 686]]

NOTE 4: a bank must have a systematic process for determining the methodologies used to incorporated data (e.g. scaling qualitative adjustments, or informing the development of improves scenario analysis). [[Condition: 510]]

2. internal loss data and loss data generated and/or communicated by others banks are identified, and the relevance of the loss data is ensured; [[Condition: 503, 674, 861]]

NOTE 1: external loss data should include all information that would help in assessing the relevance of the loss event for other banks. [[Condition: 860, 861, 508]]

NOTE 2: external loss data should include information on actual loss amounts, the scale of business operations where the event occurred, the causes of the loss events and the circumstances of the loss events. [[Condition: 504, 505, 506, 507]]

NOTE 3: a bank must have a systematic process for determining the situations for which external data must be used. The conditions and practices for external data must be reviewed and documented. [[Condition: 509, 511, 512, 513, 514, 515, 516]]

3. the bank risk assessment is more forward-looking and reflect directly the quality of bank's control and operating environments; [[Condition: 166, 523, 524, 461]]

4. loss data are used to perform operational risk measures which provide an objective basis for supporting Basic Operational Risk Analysis group (BORA) and regulatory capital requirement measurement; [[Condition: 166, 461]]

NOTE 1: A bank must demonstrate that its operational risk measure meets a soundness standard comparable to that of the internal ratings-based approach for credit risk (ie comparable to a one year holding period and a 99,9 percentile confidence interval). [[Condition: 449, 460]]

NOTE 2: a minimum five-year observation period of internal loss data

is required whether the internal loss data is used directly to build the loss measure or validate it. But the first time, a three-year historical data windows is acceptable. [[Condition: 471,472]]

NOTE 3: The sensitivity of a bank's risk estimates to changes in the factors need to be well reasoned. [[Condition: 527]]

5. internal loss data can be mapped in 8 business lines and 7 loss event types (defined in Basel II) and made available for relevant processes; and [[Condition: 455, 473 - 478, 686, 687, 865, 866]]

NOTE 1: on demand of national banking supervisors, a bank must be able to map its internal loss data with Basel II categories. [[Condition: 473, 474]]

6. storage and handling of the external loss data are controlled; [[Condition: 860, 861]]

3.9 CONF Configuration Management

Process ID	CONF
Process Name	Configuration Management
Process Purpose	The purpose of the Configuration Management process is to ensure the integrity of all operational services and infrastructure components, with their associated documentation; and to provide an information service to facilitate the effective and efficient identification, assessment, control of operational risks.
Process Outcomes	As a result of successful implementation of the Configuration Management: 1. a configuration management strategy is developed; 2. a configuration management system is implemented in accordance with defined strategy; 3. configuration item (CI) are identified, selected, classified, labelled, assigned, linked as appropriate and baselined during the all life cycle (comparison point); NOTE 1: Configuration item should include systems, people, internal processes, associated documentation and all material useful for operational risk management. 4. modifications of the configuration items are controlled;

GRIF PROJECT
Basel II – Operational Risk Management:
Process Reference Model

COMMISSION de SURVEILLANCE
du SECTEUR FINANCIER
LUXEMBOURG

	5. modifications are made available to affected processes;
	6. all current and historical data (status) associated to configuration items are recorded, documented, reported and kept available;
	7. the completeness and consistency of the configuration items are under control and verified; and
	8. storage and handling of configuration items are controlled.
